

GATIK TULSIANI

AI Engineer Intern | AI Systems Builder

Relentless builder bridging the gap between AI engineering and real-world execution, operating at the intersection of automation, scalable backend systems, and intelligent applications. I don't just write code — I design and deploy end-to-end systems that solve practical business problems, from AI agents and automation pipelines to full-stack applications. Combining strong technical foundations with a product-focused mindset, I focus on building impactful, scalable solutions that improve efficiency, enable smarter decision-making, and deliver real-world value.

WORK EXPERIENCE

AI Automation Engineer (Freelance)

Dubai, UAE

Operating as a fractional engineering partner for UAE-based SMBs and luxury brands, turning manual operations into automated systems and shipping production-grade digital experiences.

- **AI Workforce:** Designed and deployed AI Sales Bots (OpenAI + LiveKit) capable of handling cold outreach and initial lead qualification for UAE clients.
- **3D Animated Web Experiences:** Designed and shipped two heritage-grade websites built in React 19 + Vite, Tailwind v4, GSAP, and Framer Motion — featuring cinematic looping video, custom SVG monograms, scroll-driven animations, and slide-in overlay navigation. Both deployed to production on Vercel with sub-second load times on mobile.
 - **RS Jewellers (Ajmer, India → UAE expansion-ready):** Full brand strategy, end-to-end React build, Google Veo-generated cinematic video assets, WhatsApp Business integration, click-to-call wiring, and mobile-first responsive design. Live at rs-jewellers.vercel.app.
 - **YORCH Yacht Charter (Dubai market positioning):** A passion build targeting the UAE luxury charter segment — fleet showcase, cinematic hero, fleet-specific video reels, slide-in fleet overlay, custom GSAP-choreographed navigation. Designed for the Gulf yacht-charter buyer aesthetic.
- **B2B SaaS Portal (Production):** Currently architecting and building **Suryami Airport Transfers Portal** — a B2B booking platform for UAE-based travel agents featuring prepaid wallet system, real-time admin booking lifecycle (PENDING → CONFIRMED → ONGOING → COMPLETED), zone-based pricing engine, and real-time notifications. Built on Node.js + React + Prisma + PostgreSQL (Supabase), with Stripe/Razorpay wallet top-ups, WebSocket real-time updates, and Sentry error monitoring. Deployed on Vercel. **Repo:** github.com/tulsianigatik07-tech/suryami-portal
- **Production Deployment & DevOps:** Shipping live applications on Vercel with custom domains via Namecheap, Cloudflare security/CDN configuration, automated CI/CD via Git-linked deploys, and Sentry-powered error monitoring across all UAE client deployments.
- **System Architecture:** Built custom integrations connecting CRMs, WhatsApp API, and Google Workspace via custom code and n8n workflows.
- **ROI Delivery:** Delivered automated workflows that cut client operational

TECHNICAL SKILLS

Frontend & Full Stack: Next.js, React.js, Prisma, Tailwind v4
Backend Engineering: FastAPI, Node.js, REST APIs, Supabase, PostgreSQL
AI & Systems: OpenAI API (GPT-4o), RAG Pipelines, Batching, Concurrency
AI & Voice Eng.: LiveKit, VAPI
Web Animation: GSAP, Framer Motion, Vite
Core Languages: Python, JavaScript / TypeScript, SQL
DevOps: Docker, Kubernetes (Basic), Git / GitHub
Rapid Prototyping: Replit, Lovable.dev, VS Code (Cursor / Copilot), Supabase
Automation: Zapier, Make.com, n8n, REST API Integration
Design: Figma
Tools: Vercel, Cloudflare, Sentry, Stripe, Resend, Namecheap
AI Media & Agents: HeyGen, Nano Banana, Bunee
Workflow: Claude Code (Highly Efficient Debugging & Development)

LANGUAGES

English (Fluent)
Hindi (Fluent)

TOOLS & SOFTWARE

OpenAI API & ChatGPT
Zapier & Automation Platforms

costs and improved lead conversion rates by ensuring zero lead leakage.

- **Technical Sales:** Pitched and closed 100+ decision-makers on high-ticket automation packages, proving the ability to sell complex tech to non-technical founders.
- **Custom Software Development:** Architected and built a custom internal accounting system to digitize inventory tracking and automate payment schedules, replacing manual ledger processes and the hectic VAT filing processes for SMBs in UAE.

RS Jewellers — AI Engineering Intern

- Designed and deployed AI-powered automation workflows using Claude Code and n8n to streamline customer interactions, follow-ups, and lead generation.
- Built LLM-based chatbot systems and AI agents for handling customer queries and product recommendations in real time.
- Developed backend systems using Supabase and FastAPI, enabling scalable APIs and efficient data handling.
- Deployed full-stack applications on Vercel, ensuring performance, reliability, and smooth user experience.
- Integrated third-party services including Stripe (payments), Resend (emails), Namecheap (domains), and Cloudflare (security & performance).
- Implemented monitoring and debugging pipelines using Sentry to improve system reliability and error tracking.
- Built AI media pipelines using HeyGen (AI video) and Nano Banana (image generation) for enhanced customer engagement.
- Designed and deployed AI agents (Bunee) for workflow automation and task execution.
- Applied LLMs and automation systems to solve real-world retail business problems and improve operational efficiency.

CURRENTLY LEARNING & BUILDING

Learning and building alongside Aditya Mathur (Member of Technical Staff @ Sentry), focusing on modern AI systems, debugging workflows, and production-level engineering practices.

Participated in the Solana Hackathon, gaining hands-on experience with blockchain-based application development.

PROJECTS

Mentra AI *Hackathon Project (2026, University of Birmingham)*

Built an AI-powered reflection and productivity assistant with intelligent insights, task planning, and user-focused automation.

OpenAI Parameter Optimization Project

Participating in a model optimization challenge focused on designing efficient language models under strict constraints. Experimenting with lightweight transformer architectures, parameter-efficiency techniques, batching, concurrency optimization, and architecture tuning to improve performance within tight resource limits.

RG Academy AI System *2026 – January*

Built AI-based system for student performance analysis, insights, and recommendations.

CRM Software (HubSpot, Zoho)

Microsoft Office Suite

Google Workspace

Video Conferencing (Zoom, Teams, Meet)

WhatsApp Business Tools

Canva (Graphic Design)

ADDITIONAL INFO

Event Coordinator (Volunteer)

TII Open Source AI Event

Participated in Solana Hackathon

Letter of Recommendation

AI Agent (Chief-of-Staff) 2025 – December

Developed AI agent for scheduling, task management, and decision-making automation.

EDUCATION

Bachelor of Computer Science (AI & Big Data)

Sep 2025 – Sep 2028

University of Wollongong, Dubai

Focusing on building end-to-end AI systems, scalable backend architectures, and intelligent applications that solve real-world business problems at production scale.
